

# Hybrid Instruction in Wharton Classrooms

Last Modified on 07/11/2023 3:55 pm EDT

This article is meant to help with recommendations, best practice, and guidance for hybrid instruction in the Wharton classrooms. All of the classrooms at Wharton have been outfitted with enhancements to help improve the hybrid teaching experience for both the instructor and the audience, whether in-person or remote.

For more in-depth information about the technology in the classrooms, please see this article: [Using Technology in the Classrooms](#).

**First Time Teaching Hybrid?** If this is your first hybrid teaching experience please reach out to [Classroom Technology](#) or your [Wharton Computing representative](#) to set up a training session.

## Hybrid Instruction

In this article, hybrid instruction refers to teaching from a Wharton classroom to both an in-person audience as well as a remote audience, synchronously.

The classrooms have been equipped with specific tools and technology to help specifically with hybrid instruction.

- All tiered classrooms have a mobile cart which includes technology to enhance hybrid instruction:
  - a confidence monitor - use this to confirm the experience that remote attendees are having, or display additional content to the instructor
- Zoom has been installed on all classroom computers for quick access from the classroom technology.
- The classrooms have enhanced audio equipment which will help the remote students hear (in a natural way) the conversations between the in-person audience and in-person professor as they happen in the classroom.

## Classroom Setup for Hybrid Instruction

To help ensure the best experience for both remote and in-person participants, there are a few steps that the instructor can take when beginning class:

- **Log in to the classroom computer first.** Log into the classroom computer (even if you plan to use your own laptop or tablet) so the technology will know who you are and engage the full scope of resources available for your instruction.
- **If using Zoom, log in to the Zoom client on the classroom computer and start your session there.** This makes

the host of the Zoom session the classroom computer and allows you to take full advantage of the classroom equipment specifically for Zoom.

After you log into Zoom you need change some Zoom settings to make sure you can use the additional display options in the room:

1. **Join any meeting**, and go to **General > Settings**
2. Check the box for **dual monitors**, to activate the dual monitors
3. Set Noise Suppression to **Low**
4. Under Advanced Audio Setting, set Echo Cancellation to **Auto**

- **Remember to share your content with both remote and local students by sharing your screen.** This needs to happen in the room by displaying your presentation on the projector screens in the classroom as well as within the web conferencing application via screen sharing.
- **Use a lapel microphone to make sure all of your speech is captured by both the classroom and the remote participants.** The classrooms are equipped with enhanced audio via ceiling mics and a very strong lectern mic, but the lapel mic will make sure to capture everything even if you walk away from the lectern. The lapel mic will also help prevent your speech from sounding muffled when you are wearing a mask.

## Best Practices and Recommendations

[^Top](#)

There are a number of suggestions that will help provide you the best experience with hybrid teaching:
